PREPARATION

Before use and every 15 days, thoroughly mix the coating in the container for 30 minutes using a roller

or a stirrer to ensure there's no settled residue.

If needed, adjust the application viscosity of material by DM Water. Please contact KANAT representative for adjustments if needed Filter the coating material by 150-200 micron filter before use.

Best results obtained if coating applied at temperature between 20-30°C.

APPLICATION PROCEDURE

All surfaces must be clean and dry and free of oil, grease or other contamination. Sand blasting or

metal brush processes provides improved paint performance

APPLICATION EQUIPMENT

For roller application, suitable roller machine should be used. \\

PRECAUTIONS

For best performance of the coating, curing condition and thickness

of primer and topcoat must be maintain as specified.

Application of coating must be done in area with good ventilation and curing ovens must be fitted with adequate exhaust system.

Please obey national statutory regulations for transportation,

health, safety storage and waste disposal.
